

INPPL1 fusion-hotspot benchmark report

Study: msk_impact_50k_2026

Abstract

This report analyzes INPPL1 gene fusions from the msk_impact_50k_2026 study, covering 14 fusion events. 4/14 fusions (28.6%) were in-frame. 7/14 fusions (50.0%) retained the PF03372 domain. Domain retention was tested with Fisher's exact test ($p=0.048951$, statistically significant at $\alpha=0.05$). No literature benchmark is configured for INPPL1.

Results summary

Fusion partner frequency

Fusion-partner frequency was tabulated across 14 analyzed fusion events, identifying 11 distinct fusion partner genes. The most frequent partner was FCHSD2, observed in 4 events.

Domain retention

PF03372 domain retention was tested with Fisher's exact test comparing in-frame fusions against all others; 4/4 (100.0%) of in-frame fusions retained the domain, $p=0.048951$ (statistically significant at $\alpha=0.05$). A breakpoint-position permutation test produced a corroborating empirical p-value of 0.108911.

Domain disruption

Disruption of the configured disruption-required domain(s) was tested with Fisher's exact test comparing in-frame fusions against all others; 0/4 (0.0%) of in-frame fusions disrupted the domain, $p=1$ (not statistically significant at $\alpha=0.05$). A breakpoint-position permutation test produced a corroborating empirical p-value of 1.

Cutpoint detection

Cutpoint detection scanned 13 mapped breakpoints for the protein position that best separates domain-retained from lost/disrupted fusions; the inferred cutpoint was position 560 aa (permutation-corrected $p=0.033966$, statistically significant at $\alpha=0.05$). This is 131 aa from the nearest configured domain boundary at 429 aa.

Corroborating confidence statistics

Corroborating confidence statistics compared Domain_retention_flags groups "retained" ($n=7$) and "not_retained" ($n=6$). For Frame_status, retained: 4/5 (80.0%, 95% CI 37.6%-96.4%); not_retained: 0/2 (0.0%, 95% CI 0.0%-65.8%). Welch's t-test comparing Tumor_variant_count between groups gave means of 19.7143 vs 43.3333, $p=0.434221$ (not statistically significant at $\alpha=0.05$).

Composite evidence score

Composite evidence score produced results for this run (11 row(s) in composite_evidence_ranking); see the accompanying table.

Exon retention

Exon retention produced results for this run (1 row(s) in Exon_retention); see the accompanying table.

Joint partner

Joint partner reported: INPPL1 has no gene_pair configured; joint-partner analysis was skipped.
